Bangladeshi National | Employment Pass (Category 2) —availability with straightforward pass transfer

PROFESSIONAL SUMMARY

Results-driven Senior Software Developer with 6+ years of hands-on experience building and stabilizing enterprise-grade platforms under production pressure. Proven expertise resolving critical incidents—including 100% CPU crashes, memory leaks, and race conditions—across Node.js microservices serving 10,000+ concurrent users. Deep proficiency in MongoDB performance optimization, real-time WebSocket systems, and multi-platform API integrations. Combines strong technical ownership with business-focused delivery, consistently translating complex requirements into scalable, high-availability production systems.

KEY ACHIEVEMENTS

- **Resolved Critical Database Outage:** Diagnosed and eliminated 100% CPU / 8GB memory leak in production MongoDB caused by duplicate PM2 processes, restoring CPU to <15% and stabilizing service for 10,000+ daily users.
- **Eliminated Race Condition Defect:** Debugged and fixed async timer sequencing in chat timeout controller that triggered simultaneous message floods, implementing correct 5–10–15 min escalation with state management.
- **Architected Data Archiving Pipeline:** Designed and executed zero-downtime migration of 2M+ chats, 500K+ customer records, and 1M+ social messages, improving query performance by 45%.
- **Reduced Support Resolution Time 75%:** Deployed Angular + Node.js e-ticketing system that streamlined support workflows, cutting average ticket resolution from 24 hours to 6 hours.

TECHNICAL SKILLS

Backend	NodeJs, Express.js, NestJs, Socket.IO, REST APIs, WebSocket, PHP, Python, PM2 Process Management, Event-Driven Architecture, Redis, RabbitMQ
Frontend	Angular, TypeScript, JavaScript (ES6+), React, Vue.js, HTML5, CSS3, jQuery, Bootstrap, AJAX, Responsive Design
Database	MongoDB (Optimization, Indexing, Aggregation Pipelines), MySQL, MSSQL, Firebase, Data Modeling, Performance Tuning
DevOps	Linux Server, Apache, Nginx, Docker, Docker Compose, Git, GitHub, GitLab, CI/CD, Google Cloud, Alibaba Cloud
Integrations	WhatsApp Business API, Facebook Messenger API, Twitter API, Instagram API, LINE Messaging API, Zoho CRM, Freshdesk, Salesforce
AI & Tools	Claude AI, Claude Code CLI, ChatGPT, Gemini – Backend Automation, Architecture Design, Debugging

PROFESSIONAL EXPERIENCE

Lead Software Developer

Sep 2020 – Present

Accordia Global Sdn Bhd – Subang Jaya, Selangor, Malaysia

- Lead end-to-end technical architecture for enterprise omnichannel platform integrating WhatsApp, Facebook, Twitter, LINE, and Instagram with real-time chat, automated routing, and intelligent agent assignment for 10,000+ daily active users.
- Diagnosed and resolved production MongoDB crisis by identifying duplicate PM2 processes consuming 8GB memory; reduced CPU utilization from 100% to <15%, restoring full platform stability.
- Architected and executed data archiving pipeline migrating 2M+ chats, 500K+ customers, and 1M+ social messages to archived collections, delivering 45% query performance improvement with zero downtime.
- Identified and fixed race conditions in chat timeout controller causing simultaneous message floods; implemented proper async timer sequencing with 5–10–15 min escalation and state management.
- Built campaign management system enabling marketing teams to send personalized WhatsApp templates to 5,000+ customers with scheduling, template management, and delivery tracking.
- Developed bidirectional CRM integrations with Zoho, Freshdesk, and Salesforce, automating ticket creation and reducing manual data entry by 80%.
- Deployed Angular + Node.js e-ticketing system that streamlined support workflows, reducing average resolution time from 24 hours to 6 hours (75% improvement).
- Profiled and resolved Node.js memory leaks in long-running services through connection pooling optimization, orphaned WebSocket cleanup, and proactive monitoring instrumentation.

Software Developer

Dec 2018 – Aug 2020

Neuron AI Sdn Bhd – Kota Samarahan, Sarawak, Malaysia

- Architected multi-tenant HR portal with corporate subdomain registration and cross-platform mobile apps (Android/iOS WebView), onboarding 15+ corporate clients for attendance management.
- Built industrial batching plant software (VB.NET, MSSQL) with Microsoft Sync Framework, enabling offline-first data synchronization for manufacturing environments.
- Developed Python REST APIs for real-time emotion detection ML pipeline, processing video streams with <100ms latency for AI research applications.
- Created stock monitoring and invoice management system with desktop (VB.NET) and web interfaces, automating inventory tracking for 50+ SKUs.

EDUCATION

Bachelor of Computer Science with Honors (Software Engineering)

2019

University Malaysia Sarawak (UNIMAS)

CGPA: 3.24 / 4.0

PROFESSIONAL DEVELOPMENT

- **Machine Learning** – AgTech AI Hackathon (2019)
- **Web Application Development** – Microsoft Imagine (2018)
- **Digital Marketing** – Shaw Academy (2016)
- **IELTS** – British Council (2015)
